

Proxmox Virtual Environment is an easy to use Open Source virtualization platform for running Virtual Appliances and Virtual Machines

# PROXMOX

## DATASHEET

# Proxmox Virtual Environment

### AT A GLANCE

- Complete enterprise virtualization solution
- HA without SPOF
- VM Templates and Clones
- KVM hypervisor with an enterprise class management system
- OpenVZ—Container-based virtualization
- Comprehensive management feature set
- Open source solution

### OVERVIEW

Proxmox VE is a complete virtualization management solution for servers. You can virtualize even the most demanding application workloads running on Linux and Windows Servers. It combines the leading Kernel-based Virtual Machine (KVM) hypervisor and container-based virtualization with OpenVZ on one management platform.

The unique multi-master design eliminates the need of an additional management server like seen on other solutions. This saves resources and also allows high availability without single point of failures (no SPOF).

The included web-based management empowers the user (and admin) to control all functionalities easily. This includes full access to all logs from all nodes in a cluster, including task logs like running backup/restore processes, live-migration or High Availability (HA) triggered activities.

### ENTERPRISE-READY

Proxmox VE includes all the functionalities you need to deploy an enterprise-class virtualization environment in your company. Multiple authentication sources combined with role based user- and permission management enables full control of your virtualization cluster. The RESTful web API enables easy integration for third party management tools like custom hosting environments.

The future-proof open source development model guarantees full access to the source code and maximum flexibility.

### ABOUT PROXMOX

### SALES AND INQUIRIES

Proxmox Server Solutions GmbH is a privately held corporation based in Vienna, Austria.

Feature	Description
<b>Leading Enterprise Virtualization Technologies</b>	<ul style="list-style-type: none"> <li>• Linux and Windows Servers, 32 and 64 bit operation systems</li> <li>• Support for the latest Intel and AMD server chipsets for great VM performance</li> <li>• Leading performance relative to bare metal for real-world enterprise workloads</li> <li>• Management layer contains all the capabilities required to create and manage a virtual infrastructure</li> </ul>
<b>Live Migration</b>	<ul style="list-style-type: none"> <li>• Move your running servers from one physical host to another one without downtime.</li> </ul>
<b>Open Source</b>	<ul style="list-style-type: none"> <li>• Licensed under GNU Affero General Public License, version 3 (AGPL, V3: <a href="http://www.gnu.org/licenses/agpl-3.0.html">http://www.gnu.org/licenses/agpl-3.0.html</a>)</li> <li>• Public code repository (GIT)</li> <li>• Bugtracker</li> <li>• Community Forum</li> <li>• Wiki for documentation and HowTo's</li> </ul>
<b>High Availability Cluster</b>	<ul style="list-style-type: none"> <li>• No single point of failure (no SPOF)</li> <li>• GUI for managing KVM and OpenVZ HA settings</li> <li>• Based on proven Linux HA technologies, providing stable and reliable HA service</li> <li>• Resource agents for KVM and OpenVZ</li> <li>• Support for reliable hardware fencing devices</li> </ul>
<b>RESTful web API</b>	<ul style="list-style-type: none"> <li>• Easy integration for third party management tools like custom hosting environments</li> <li>• REST like API (JSON as primary data format, and the whole API is formally defined using JSON Schema)</li> <li>• Easy and human readable data format (native web browser format)</li> <li>• Automatic parameter verification (we can also verify return values)</li> <li>• Automatic generation of API documentation</li> <li>• Easy way to create command line tools (use the same API)</li> <li>• Resource Oriented Architecture (ROA)</li> <li>• Declarative API definition using JSON Schema</li> </ul>
<b>Rich web app for Management</b>	<ul style="list-style-type: none"> <li>• No need to install a separate management tool or any additional management node</li> <li>• Fast search-driven interface, capable of handling thousands of VM's</li> <li>• Secure VNC console, supporting SSL</li> <li>• Wizard based creation of virtual servers and containers</li> <li>• Seamless integration and management of Proxmox VE 2.x Cluster</li> <li>• Support subscription management</li> <li>• Role based permission management for all objects (VM's and CT's, storages, etc.)</li> <li>• Support for multiple authentication sources (e.g. local, MS ADS, LDAP, ...)</li> <li>• AJAX technologies for dynamic updates of resources</li> <li>• Based on Ext JS 4.x JavaScript framework.</li> <li>• Cluster-wide Task and Cluster logs—The GUI shows all running tasks from the whole cluster but also the history and the syslog of each node. This includes running backup or restore jobs, live-migration or HA triggered activities</li> </ul>
<b>Backup and Restore</b>	<ul style="list-style-type: none"> <li>• Full backups of OpenVZ containers and KVM VMs</li> <li>• Live Backups via LVM snapshot</li> <li>• Multiple schedules and backup storages</li> <li>• GUI integrations, but also via CLI</li> <li>• "Backup Now" and restore via GUI</li> <li>• All jobs from all nodes can be monitored via "Tasks"</li> </ul>
<b>VM Templates and Clones</b>	<ul style="list-style-type: none"> <li>• Deploying virtual machines from templates is blazing fast, very comfortable and if you use linked clones you can optimize your storage by using base images and thin-provisioning.</li> <li>• Linked and Full Clones</li> </ul>
<b>Role-based Administration</b>	<ul style="list-style-type: none"> <li>• User- and permission management for all objects (VM's, storages, nodes, etc.)</li> <li>• A role is simply a list of privileges. Proxmox VE comes with a number of predefined roles which satisfies most needs. The whole set of predefined roles can be seen on the GUI.</li> <li>• Permissions are the way to control access to objects. In technical terms they are simply a triple containing &lt;path,user,role&gt;. This concept is also known as access control lists. Each permission specifies a subject (user or group) and a role (set of privileges) on a specific path.</li> </ul>
<b>Multiple Authentication Sources</b>	<ul style="list-style-type: none"> <li>• Proxmox VE supports multiple authentication sources</li> <li>• Linux PAM standard authentication (e.g. 'root' and other local users)</li> <li>• Proxmox VE authentication server (built-in)</li> <li>• Microsoft Active Directory (MS ADS)</li> <li>• LDAP</li> </ul>

## PROXMOX VE SUBSCRIPTIONS

Proxmox VE Subscriptions is a service program designed to help IT professionals and businesses to keep their Proxmox VE deployments up-to-date. A Proxmox VE Subscription enables fast and easy access to updates and to professional support services for your virtualization server deployments.

Choose the subscription plan that's best for you. Subscriptions are licensed per physical server and per CPU-socket. Subscription period is one year from purchase date.

	COMMUNITY	BASIC	STANDARD	PREMIUM
Stable updates via Enterprise repository	Yes	Yes	Yes	Yes
Technical support	via community forum	via Proxmox Customer Portal	via Proxmox Customer Portal	via Proxmox Customer Portal
Support tickets included	None*	3 per year	10 per year	Unlimited
Response time	n/a	1 business day	1 business day	1 business day
Remote login via SSH	No	No	Yes	Yes
Qualified for the purchase of additional support tickets	No	Yes	Yes	n/a
Pricing	<b>€ 4,16</b> per month & CPU-socket	<b>€ 16,58</b> per month & CPU-socket	<b>€ 33,17</b> per month & CPU-socket	<b>€ 66,33</b> per month & CPU-socket

\* Support via public community forum

## ADDITIONAL SUPPORT TICKETS FOR SUBSCRIPTIONS

If you need more support tickets for your Basic or Standard subscription, you can purchase additional Proxmox VE support tickets. Additional support tickets include remote login support via SSH if necessary. A support ticket is valid for one year after purchase date.

	1 Support Ticket	3 Support Tickets	5 Support Tickets	10 Support Tickets
Pricing	€ 200	€ 540	€ 800	€ 1.400

### Important note:

To purchase additional Proxmox VE support tickets, you need to have valid Basic or Standard subscriptions for your servers. In a Proxmox VE Cluster you need to have a subscription at the same level for each server. A Community Subscription is not valid for the purchase of additional support tickets.
